Dear IRRC,

Vote NO on a resolution or any other measure that comes before you to delay the adoption of regulations for both conventional and unconventional operators. People are suffering where drilling is occurring and you must act to protect them, not the industry - insist that Chapter 78 and 78a, the gas and oil drilling rules, be swiftly adopted.

This is important to the health of the people of this state, but also the health of this world. Recent events like the methane emission catastrophe at the gas well at Porter Ranch in California demonstrate the need for strictly enforced environmental rules. Methane is the worst climate/atmosphere pollution source. Presently this country is the worst methane polluter in the world.

Please ignore gas drillers lobbying to stop environmental rules

Sincerely,
Winifred Lutz
