Hi ,
I was wondering if Cabot has a policy or plan as to how they deal with a well that they would shut down and cap or seal as it had ceased production.

Also, our property is located between the Lathrop and new Shields Compression Stations. The Shields station is very brightly light and rather exposed to wind etc. Planting large fast growing evergreen trees around the station would act as a wind break (a factor in a fire or explosion) and would help in sound dampening as well as the night time light.

I would be willing to work with them on this .
This same idea could be good for some well sites as well.
Thanks, Max Henry
