Thanks for taking public comments on the state's oil and gas regulations, known as Chapter 78 of the Pennsylvania Code. I want to make sure that the new regulations protect the air, water, and health of everyone in PA.

It is very important to do the following:

- require drilling company operators to restore contaminated drinking water to a quality that meets Safe Drinking Water Act standards, no matter what the quality of the water prior to drilling.
- prohibit drilling company operators from using open pits for storage waste. Many spills, leaks, and other problems involving open pits have occurred statewide that contaminate water, soil and air.
- require drilling company operators to follow the federal regulation of hazardous substances that other industries have to follow.
- require drillers to identify existing wells before site and well construction and drilling (not just fracking), so that the location of a new well can be changed if needed. Drillers should then be responsible to plug and seal or otherwise appropriately address abandoned and orphaned wells according to state safety standards prior to well site construction.

No attachments were included as part of this comment.

Please contact me if you have any questions.

Sincerely,
Hayley Book
