Why are we allowing more
Nox in Pennsylvania with this lax
smog rule? Why do we continue to
externalize the costs of fossil
fuels and make them artificially
cheap? Shouldn't polluters at least
help to pay for the costs of
climate change, & respiratory
problems due to bad air? When
we artificially make fossil fuel
generation cheap we don't allow
wind & solar power the proper value
that they deserve. As a resident
of Pa I request that the DEP
make the smog rules stricter
& clean our air.

Thanks
