RE: Implementation of the Alternative Energy Portfolio Standards Act of 2004  
Pa. PUC Docket No. L-2014-2404361)  
Independent Regulatory Review Commission ("IRRC") No. 3061

Dear Attorney Elliot:

As a participant in the Commonwealth's AEPS and net metering program through our landfill gas-to-energy project, we remain very concerned as previously expressed to the PAPUC and IRRC with the final revised ruling passed by the PAPUC on June 9, 2016. We ask your Office disapprove this final revised rulemaking, as the IRRC has now twice done.

The new legal definition of what is considered a "utility" which says "A person or entity that provides electric generation, transmission or distribution services, at wholesale or retail, to other persons or entities" is so broad that it appears to negate any chance of any party involved in any form of electricity production or distribution to anyone. It is setting a precedent by declaring any alternative energy producer that basically provides power to anyone else as a "utility". The Public Utility Code specifically excludes Electric Generation Suppliers (non-PAPUC regulated suppliers) from the definition of a public utility.

A utility is traditionally considered a provider of services for the good of the general public. A small, on-site, non-regulated alternative energy system is simply not a utility by any definition. This new utility definition in conjunction with the revised customer-generator definition (which goes beyond the statutory language) does not support the AEPS Act's intent to promote renewable generation. The results of these changes will

severely impede existing project economics and the development of new alternative energy systems.

Our understanding is that the net metering rules were established to promote the use of renewable energy in the Commonwealth under the AEPS Act which "was designed to foster economic development, encourage reliance on more diverse and environmentally friendly sources of energy ". In our opinion, however, the proposed legal changes to the intent of the Act will undermine these objectives and slow the acceptance of these environmentally responsible technologies.

Significant investments were and are being made, benefiting both the environment and the local communities, relying on this understanding. Changing the rules after the fact is unfair to current and new net metering participants and threatens the viability of their businesses. In addition, it undermines public trust in the Commonwealth and its existing laws. Pennsylvania will have difficulty attracting future investment, if its announced long term policies are subject to regular revision.

Thanks for your consideration of our comments.

Respectfully Submitted,

James Warner
