Subject: Vaccine policy for Pennsylvania

To whom it may concern:

I am a long-term resident of Pennsylvania and I have done intensive research on vaccines and their effects on humans as well as animals. I am in total agreement with Charmaine Rusin, Director, and Alison Mullins, Co-director of The Pennsylvania Coalition for Informed Consent. I have attached their letter concerning vaccines and the proposed changes to the Pennsylvania law.

Firstly, from my research I have ascertained that today's vaccines contain ingredients which are highly toxic synergistically and/or alone. Vaccines cause life-long autoimmune disease such as autism, paralysis, pain and even death. They are also usually ineffective! In addition, because we have each been given a highly effective immune system, these pharmaceutical products are not necessary. In fact, they are extremely deleterious to human and animal health. **It is a scientific fact that vaccines impair the immune system and make it less effective. I have many friends who have received the flu vaccine which is full of toxic mercury, who have within three weeks come down with the flu!**

Secondly, inoculating people with these substances should only be with the approval of the parents or the adults receiving the vaccine. **Vaccines should NEVER, EVER be mandated!!** To do so would be a gross violation of the Fourth Amendment of our constitution.

In my opinion, the sale and use of vaccines is a crime against nature and solely for the profit of "big pharma".

Very sincerely,
Christine U. Lindenmuth
