2016 MAY -3 PM 3: 06

Dear Ms Findley,

It is not always necessary to seek medical care when a child has the chickenpox. This child who has had this virus should not be required to have the vaccine, because they have a natural immunity to the virus. I believe a written statement from the parent or parents should continue to be viewed as sufficient evidence of the child's history of having chickenpox.

Sincerely,  
Kelli Maysilles
