Subject: New proposal for vaccination requirements

I was surprised that you claim no costs but many benefits of blanket vaccination. Benefits of sparing children from suffering disease but zero side effects of the vaccines. Every vaccine comes with extensive warnings of serious side effects including death. Payments by the vaccine injury fund exceed \$3 billion so it is clear there are costs.

Further no discussion of the effectiveness or needed levels of compliance to meet the mysterious goals by the authors of this proposal.

How many deaths from vaccines in the US balance the 18 reported disease deaths?

How many more cases had PA compared to more highly vaccinated nearby states? That is helpful information to consider. If there is no significant difference why are we pushing so hard to force vaccinations? You need real cost / benefit analysis and not skewed benefit only propaganda
