Subject: Proposed immunization requirements

Hello. Please accept the following as my comments concerning your proposed changes to the above.

For the sake of time please see the attached discussion points set forth by the Pennsylvania Coalition for Informed Consent. I have read every word of their and agree with every concern and point raised. <http://www.pacic.org/take-action.html>

Please understand that Pennsylvania is not some 3rd world country. There was one single reported measles case in the entire state last year. There is absolutely no imminent threat to any population's health. Adding more questionably safe vaccines to the mix is pointless and expensive. Furthermore above all else it is imperative that a parent decide their child's health not some bureaucrat.

Vaccines can and have injured children. An unvaccinated child poses no greater risk than a vaccinated child. I am personally aware of several children who are exceptionally healthy and intelligent and have never had a vaccine through adulthood. I also count myself as one of the many who live productive lives without vaccines, boosters or any prescription drugs.

Please continue to allow parents to exercise their basic human right to raise their child their own way. Vaccines aren't for everyone. Just as prescription drugs aren't. Everyone deserves a choice.

Thank you.
