Regarding IRRC #3146 & 3147

I also have strong issues regarding the electronic personal information that will be accessible about my family and my children over the internet. I do not consent to medical or personal information being accessible online. In their haste to make things faster and more accessible in order to comply, the government sees no issue with this private, personal, and sensitive information being put online? I DO have a problem with it.

Please do not pass this legislation.

Thank you,
Carisa Kozicki

Regarding IRRC #3146 & 3147

I am writing to you to let you know that removing provisional admission to schools of under vaccinated or unvaccinated students should be stopped. Requiring students to play catch up when their bodies are not designed to handle an assault of toxins all at once is not in the best interest of the children nor of our society. Would you want to get a bunch of vaccines all at once? That is what will end up happening as doctors and parents race to fulfill these arbitrary deadlines that have nothing to do with child safety or health. It could and will likely be disastrous for many families with injured and sick children being a result.

Plus, several of these vaccines are live version vaccines; therefore those students who recently received a live virus vaccine may in fact be contagious. Will the schools keep them separate from those that cannot receive vaccines, the "medically unable" that are mentioned within this proposal? I want to share this due to the hypocrisy of this paragraph.

Cited quote from proposal:

The proposed regulations are intended to make revisions to Subchapter C of Title 28 (relating to immunizations), in the main, to take steps to ensure that children attending school in the Commonwealth are adequately protected against potential outbreaks of vaccine preventable diseases. In some cases, the only way to ensure that children are adequately protected, particularly those children who are medically unable to obtain a vaccination, and, therefore, vulnerable, is to require the immunization of all children attending school.

Instead, families should be allowed to retain their medical freedom and their choices, especially families with children attending charter, homeschooled, and private institutions.

Who determines who is medically unable? Will all children be tested to make sure they aren't going to have reactions to vaccines or their ingredients before being injected? My child wasn't tested before getting a round

of vaccines at 2.75 months and ended up in the hospital for 8 days! Now I have had three different doctors tell me to skip certain vaccines, but this might not be good enough for proper "paperwork" and exemptions.

Why are these safety precautions being overlooked? There is no failing herd immunity. There is however vaccine failure. And why require vaccines that are for diseases that are not contagious? For instance, tetanus is not contagious, but yet it is part of the requirement.

There are too many questions without answers regarding vaccine safety. There are recalls, and failures, and many of these are for diseases that would not cause great danger to the public. For these and many other reasons, they need to remain a personal decision. Vaccines are not safe for all people; therefore, they cannot be required of all.

Please keep health care choices in PA where they belong - in the hands of the patients and parents - and out of the hands of government official and school officials who do now know the medical and personal reasons behind choices made by families.

**Thank you,
Carisa Kozicki**
