Subject: PA child care regulations and breastfeeding

I am writing my comments in regard to the PA child care regulations and breastfeeding. I am a board certified lactation consultant. Breastfeeding saves billions of dollars a year in the USA in health care spending. Breastfeeding education for childcare staff will not add to their workloads. The education is about creating a breastfeeding friendly environment and the safe bottle-feeding and storage of human milk. Please make this education part of the standard for child care workers in PA Thank you
