Comments entered:

If we're to avoid Climate Heating's worst-case scenario, we must reduce emissions and pollution from the fossil fuel industry. Their cooperation over the last 30 years has been too little, too late. We need strong regulations. I'm writing to support PA-DEP's proposal to set standards to protect public health from VOCs and climate pollution from oil and gas operations in Pennsylvania.

While these are a crucial step, I'm calling on PA-DEP to strengthen its proposal by closing existing loopholes for low-producing wells, remove provisions that reduce frequency of inspections for some oil and gas operators, and set these standards for all new and existing oil and gas operations.
