Comments entered:

I'm writing to encourage you to close the loopholes that exempt "low-producing " wells from reporting leakage and repairing them. The grander proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health is excellent. I stand proud to be a PA resident. However, the proposal currently contains loopholes that must be addressed.

First, please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. These wells, despite not producing much gas, are responsible for more than half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures and therefore require on-the-ground leak inspections.

Second, please eliminate the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. We've seen from other states and the latest research that large, uncontrolled leaks can occur at any time. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and the environment.

Preserve our beautiful and robust state for our future and our heirs. They count on us to be stewards of our environment.

Comprehensive regulation on methane will send a signal to investors, the country, and the world that Pennsylvania can advance long-term climate solutions in a way that both protects our communities and makes good business sense. Please protect our health and climate by strengthening and removing loopholes from the proposed methane rule released earlier this summer.

No attachments were included as part of this comment.

Please contact me if you have any questions.

Hello, we are seventh grade students. We have a policy to help the issue of unsafe drinking water. Please support our policy by signing our petition to help protect everyone from dangerous chemicals in their water. protect students from harmful chemicals at schools, no matter what the town's financial stance is. The level of government responsible for carrying out this law is State government. State government is responsible because it is supporting all of the tax-funded schools. We would ask Senators to represent and propose this policy in the state Senate. Constitution, "All political power is inherent in the people. Government is instituted for the protection, security, and benefit of the people, and they have the right at all times to alter or reform the same, whenever the public good may require it." Everyone should be entitled to the benefit of clean drinking water and it is up to our government to protect this natural resource. Clean drinking water is something that the public needs. A Trump administration aide said in an email that releasing a water contamination report would cause a "public relations nightmare." So they buried it.

All facilities that produce life threatening and climate destructive emissions must be inspected and sooner than later must be made to close as our economy fully transitions to using sources of energy that are 100% clean and renewable. Small and large facilities that produce toxins that leak into our environment can both do serious harm or kill people or wildlife.

I believe that we must do everything possible to curb climate change, and this is certainly a step in the right direction. Regulations should be strict and enforced to ensure a healthy Pennsylvania in many ways.

This week I am with my grandchildren and being with them makes me more conscious of the need for stronger rules on the control of VOC from both extraction of oil and natural gas. I plead on their behalf and urge that you as persons responsible for the quality of the air that the current and next generations of children will breathe, please look at the regulations as if they were for all of the children of Pennsylvania representing your grandchildren. Thank you.

Comments entered:

The dangers to human health posed by methane pollution and harmful organic compounds from oil and gas operations have become clearer than ever with the COVID19 pandemic. Their effects on climate warming are huge and well-known. We therefore applaud the proposed rule making to limit these emissions. It marks great progress for Pennsylvania. However, the proposal currently contains loopholes that must be addressed in our effort to curb pollution and protect the climate and public health..

First, we urge you to close the loophole that exempts low-producing wells from leak detection and repair requirements. These wells may not produce much gas, but they cause of over half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures; therefore, they ALL require on-the-ground leak inspections.

Second, you MUST delete the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. We've seen it in other states, and it is proven by the latest research: large, uncontrolled leaks can occur at any time. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and our environment.

Comprehensive regulation on methane will send a signal to investors, the whole country, and the world that Pennsylvania can advance long-term climate solutions while making good business sense and protecting our citizens and communities.

I urge you to protect our health and climate by strengthening and removing loopholes from the proposed methane rules that were released earlier this summer.

I am a native Pennsylvanian, who left the state to serve my country. I recently returned in 2014, thinking Lancaster County, the land of the Amish, would be closest to the fresh air and clean water I experienced living in Vermont. I have been shocked by the polluted air, illegal burns, toxic fumes such that I can rarely open my home's windows to bring in "fresh air" because it is such an infrequent blessing. Today on one of the hottest days, I have PennDOT Diesel trucks running while waiting to pave a nearby State Road. No wonder the cancer rate is so high here in Lancaster County. I am so grateful to Gov Pinchot for planting trees and creating State Parks and Forests.

I urge you to see what the State of New Mexico is doing in conjunction with the Environmental Defense Fund to monitor and identify all the Methane leakage in their state. Pennsylvania's Constitution states I am guaranteed clean air and clean water, so I am asking you to uphold the trust that has been placed in your hands to ensure that once again we truly have clean air and clean water in this once great State of Pennsylvania! Thank you for doing what is best for all the citizens of this great Commonwealth as well as future generations.

The proposal to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. Loopholes that must be addressed:

- Please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. All wells have equipment failures and therefore require on-the-ground leak inspections.
- Please eliminate the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and the environment.

Please protect our health and climate by strengthening and removing loopholes from the proposed methane rule released earlier this summer.

Pennsylvania is the #4 polluting state in the USA, and we must do everything we can to fight local pollution and avert climate disaster. Air Quality is a major factor in quality of life, health outcomes & expenditures, and to attracting businesses to PA.

Pennsylvania has a clear responsibility to put public health before industry profits and lead in developing real solutions to the problem of methane emissions.

The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. However, the proposal currently contains loopholes that must be addressed.

First, please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. These wells, despite not producing much gas, are responsible for more than half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures and therefore require on-the-ground leak inspections.

Second, please eliminate the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. We've seen from other states and the latest research that large, uncontrolled leaks can occur at any time. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and the environment.

Comprehensive regulation on methane will send a signal to investors, the country, and the world that Pennsylvania can advance long-term climate solutions in a way that both protects our communities and makes good business sense. Please protect our health and climate by strengthening and removing loopholes from the proposed methane rule released earlier this summer.

As a physical chemist with decades of research experience, I'm very familiar with the molecular basis of greenhouse warming, and with the thermodynamics and fluid dynamics of masses of vapor and liquid, such as our atmospheric and ocean currents. I also know that Nature respects no ideological, political, or economic dogmas, like those advanced by the antiquated fossil fuel industries and their political enablers.

The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. However, the proposal currently contains loopholes that must be addressed.

The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. Thank you.

And, please.... cut the loopholes in the proposal. If you do, you will be on my list of PA heroes!

To be specific... First, please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. These wells, despite not producing much gas, are responsible for more than half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures and therefore require on-the-ground leak inspections.

Second, please eliminate the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. We've seen from other states and the latest research that large, uncontrolled leaks can occur at any time. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and the environment. It's bad enough that company employees from other sites warn that inspectors "ARE COMING YOUR WAY" prior to inspections.

Comprehensive regulation on methane will send a signal to investors, the country, and the world that Pennsylvania can advance long-term climate solutions in a way that both protects our communities and makes good business sense. Please protect our health and climate by strengthening and removing loopholes from the proposed methane rule released earlier this summer.

Comments entered:

We must do more to contain the release of methane, one of the most potent global warming gases we produce. Fortunately, it comes mostly from concentrated sources like wells and feedlots, so controlling these emissions is easier.

The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. However, the proposal currently contains loopholes that must be addressed.

First, please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. These wells, despite not producing much gas, are responsible for more than half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures and therefore require on-the-ground leak inspections.

Second, please eliminate the rule provision that allows operators to reduce the frequency of inspections merely because past inspections did not reveal significant methane leaks. We've seen from other states and the latest research that large, uncontrolled leaks can occur at any

time. Frequent, consistent inspections are the only way to identify them before they do major damage to our communities and the environment.

Comprehensive regulation on methane will send a signal to investors, the country, and the world that Pennsylvania can advance long-term climate solutions in a way that both protects our communities and makes good business sense. Please protect our health and climate by strengthening and removing loopholes from the proposed methane rule released earlier this summer.

I would advise the state measure the amount of methane leaving a well site and compare it to the amount of methane in the pipeline at it's destination and tax the company based on how much gas has leaked. That would incentivize the companies to reduce leaks. The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health. However, the proposal currently contains loopholes that must be addressed.

First, please close the loophole that exempts low-producing wells from the rule's leak detection and repair requirements. These wells, despite not producing much gas, are responsible for more than half the methane pollution from oil and gas sources in Pennsylvania. All wells have equipment failures and therefore require on-the-ground leak inspections.

Thank you for proposing this rule and I am hopeful you can remove the loopholes in it. I am against fracking in PA and have been dismayed at the liberties and tax incentives PA has given these businesses.

I believe in climate change being increased by pollution of fossil fuels. The burning of Carboniferous materials which were in the earths atmosphere millions of years ago is scientifically proving to be detrimental. We can not easily reverse the damage as it took millions of years to settle out of the atmosphere before. I realize that this has been a long term problem and is difficult to ameliorate.

As a nation we must be an example to the world that we can change and bring in renewables. PA needs to stop giving these fossil fuel companies breaks, loopholes and incentives. It is detrimental to life on the local, national, and global levels.

It seems we need to benefit financially from these Earthly deposits but it is a short term gain and will cost is greatly in the long term. Basically it will cost lives and finally life as we know it.

With some of the dirtiest air in the country, since pollution flows west to east, we need action on controlling our states own emission of toxic substances. We deserve clean air, or at least cleaner than what we have. At the same time our state needs to take action on climate change. More methane in our atmosphere hurts our health now, and future generations will decry our lack of foresight and inaction on crises created by a warming planet. Our children and grandchildren will be left to deal with our generation's negligence, sitting idly by counting its 401k returns and politicians their campaign contributions from fossil fuel companies.

The proposed rulemaking to limit climate-warming methane pollution and harmful volatile organic compounds from existing oil and gas operations marks great progress in Pennsylvania's efforts to curb climate pollution and protect public health.
