**Re: Regulation #7-553: Water Quality Standard for Manganese and Implementation
IRRC No. 3260**

Dear Chairman Bedwick & Commissioners:

I am Vice President and General Manager for Hanson Aggregates Pennsylvania LLC (Hanson) with responsibility of our operations in western Pennsylvania. Hanson is one of the largest producers of crushed aggregate in Pennsylvania employing approximately 1,000 people. Hanson, along with all crushed aggregate producers in Pennsylvania, also play an important part in our communities by providing basic building materials for all construction and infrastructure projects. My employment with Hanson provides a good life for my employees, my family and myself.

I am requesting your disapproval of Regulation #7-553: Water Quality Standard for Manganese and Implementation, IRRC No. 3260 for the following reasons:

- This regulation ignores the intent of Act 40 of 2017;
- This regulation is discriminatory as it only applies to permitted discharges and there are thousands of unpermitted discharges of manganese across the Commonwealth that are the responsibility of the Pennsylvania Department of Environmental Protection (DEP);
- The DEP has not developed a complete analysis regarding the capital expense (i.e. cost) of this regulation. This regulation will cost Hanson significant and unnecessary capital expense with no substantial measure of environmental or health benefits; and
- The DEP's implementation of the modifying factor of 3 is outdated and not legally or scientifically required to be used.

Hanson suggests if (and when) the United States Environmental Protection Agency (USEPA) develops a nationwide regulation for manganese with regard to human health, DEP could then develop a regulation that is equitable across the Commonwealth of Pennsylvania and accounts for all discharges of manganese into Pennsylvania waters.

Chairman George D. Bedwick
