 Cresson, PA 16630 US

Comments entered:

Global Warming and its subsequent adversarial impact on the natural phenomena of climates across the planet has resulted in more extreme, more frequent, more intense conditions. Unless curtailed, the cascading effects of global warming threaten the ability of the planet to sustain life. Therefore, because scientific data has identified the acquisition, collection, distribution and use/burning of fossil fuels to be a significant and major cause of the atmospheric global warming greenhouse gases it only stands to reason that ANY initiative to reduce them must be taken. Our unhealthy dependency with unregulated consumption driven by an industry that puts profit over public health, well-being and safety is a beast to contain. With national security at risks and the need to have "A" supply of energy, it seems reasonable and rationale that DEP has created this CO2 Budget Trading Program.

While other human activities that are exacerbating global warming are being identified and addressed, I strongly support this proposed rulemaking.
