RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

Comments entered:

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Re: eComment System

The Department of Environmental Protection has received the following comments on Proposed Rulemaking: CO2 Budget Trading Program (#7-559).

Commenter Information:

David Martin
(davidkmartin6@gmail.com)
4052 ROBINHOOD DR
York, PA 17408 US

Comments entered:

Given that Pennsylvania is a commonwealth, that the air, land, and water of this state and world are a gift from God, I believe that we are called to care for our air, land, and water in ways that benefit all the people in the state, particularly its most vulnerable, and those of future generations. Currently, we are not doing that. Our commonwealth is the third largest emitter of carbon dioxide, the chief molecule that is warming the world's climate, of all the states in the country. This is in large part because of the vast coal, oil, and natural resources that have been mined, drilled and burned in our commonwealth, and because of the long hold that these extractive industries have had on our commonwealth's politics.

In addition, businesses around the world have long been in the habit of ignoring the environmental damage and concomitant costs that their businesses cause. The healthfulness of our air, land, and water is regarded as a cheap candy wrapper to be discarded in search of sweet profits for a select few.

As a result the ability of our air, land, and water to sustain life for others not valued by traditional profit and loss is overlooked, avoided, and even actively denied.

Time is running out for the world, and for our commonwealth, to address the challenge of climate change before it causes unimaginable suffering.

Addressing the carbon dioxide and other pollution caused our commonwealth's power plants in a systemic, market-oriented way is a good starting point.

The fact that the commonwealth would be joined a coalition makes it even more systemic.

(While individual conservation is important, no amount of it will get our commonwealth, country, or world to carbon neutrality.)

Accounting for the cost of carbon and other pollution will drive the market toward cleaner renewable energy sources. The funds raised not only should be used to move the whole state toward carbon neutrality, but in significant part, those funds should be used to address the needs of vulnerable individuals and communities based on the old carbon economy.

It is long past time for our commonwealth to begin stewarding our air and the climate that has allowed humanity to flourish for the last 12,000 years as a gift of God to bless all humanity and all creation now and into the future.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road. Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.

RE: Proposed Rulemaking: CO2 Budget Trading Program (#7-559)

To the Pennsylvania Environmental Quality Board:

We, the undersigned individuals and organizations, are submitting our public comment in support of Pennsylvania's establishing a carbon dioxide budget trading program and joining the Regional Greenhouse Gas Initiative (RGGI), one of the nation's most successful state-level programs for fighting climate change.

With each day that passes, climate change becomes a more urgent threat to our Commonwealth. Local impacts of the climate crisis in Pennsylvania include heat waves, worsening air quality that harms public health, more insect-borne diseases, more intense storms and flash flooding, and agricultural losses.

As the fourth largest emitter of greenhouse gases in the nation, Pennsylvania has a responsibility to reduce our emissions, and joining RGGI will put us on the right path. Over the past twelve years, this bipartisan program has had remarkable success for the participating Northeast and Mid-Atlantic

states.

Since 2008:

CO2 emissions in from RGGI states have fallen by 47%, outpacing the rest of the country by 90%;

Reductions in other air pollutants, including SO2 and NOx, that can lead to premature deaths, heart attacks, and respiratory illnesses have resulted in an additional \$5.7 billion in health and productivity benefits;

Electricity prices in RGGI states have fallen by 5.7%, while prices have increased in the rest of the country by 8.6%;

The combined economies of the RGGI states have grown by 47%, during the first ten years of the program, outpacing growth in the rest of the country by 31%.

If Pennsylvania joins the program, it could reduce its carbon emissions by 188 million tons over its first decade in the program -- that's equivalent to taking 35 million cars off the road.

Moreover, joining RGGI will not only cut carbon pollution, but also reduce nitrogen oxide and sulfur dioxide pollution, yielding significant health benefits for Pennsylvanians. DEP projects that by joining RGGI, Pennsylvania will avoid hundreds of premature deaths and 30,000 hospital visits for respiratory illness such as asthma by 2030.

Critically, participation in RGGI will enable Pennsylvania to create jobs while reducing our greenhouse gases. DEP estimates that Pennsylvania would see a net increase of over 27,000 jobs by participating in the program.

To avoid the worst impacts of climate change, we must act now to transition away from fossil fuels and toward clean energy. RGGI is one of the best tools we have to do so and would create a solid foundation for other important policy steps, like expanding goals for renewable energy. For the sake of our climate, our environment, and our health, we urge Pennsylvania's leaders to join RGGI without delay.

Thank you.
