Comments entered:

My 6th & 7th period Ecology students (9th grade) would like to share their ideas about the Proposed Rule:

Hello,

I'm writing to you today to support the Carbon Dioxide Cap and Trade plan.

As a 9th grade student at Reading High School, greenhouse gases raise equity and environmental justice issues in my community because...

1. More of a chance of a wildfire
2. Weather and food supply disruptions
3. They cause climate change by trapping heat

In conclusion, I hope that carbon dioxide is reduced in Pennsylvania because... It affects the climate change

Sincerely,
brandon

Dear Environmental Quality Board,

I support Pennsylvania's participation in the carbon dioxide cap and trade plan because it will help the environment and we will have a good air pollution

I believe that the Green Jobs created will help the environment by not having too much of burn coal and chemical in the air because it can affect kids that have asthma and those chemical can cause death as well, aslo it affect the our air pollution

1. Carbon dioxide cap and trade can help people that have asthma
2. carbon dioxide cap and trade could make our air pollution a bit better than it was before
3. carbon dioxide cap and trade will help reduce the amount of burn coal and reduce the chemical that go into the air and the affect the air pollution

In conclusion, I am glad that Pennsylvania has a plan to reduce green house gases because it'll help the environment and it will be better for people that has asthma to breathe more better than they did before and not have an asthma attack

Your's Truly,
Arianna

Hello,

I'm writing to you today to support the Carbon Dioxide Cap and Trade plan.

As a 9th grade student at Reading High School, greenhouse gases raise equity and environmental justice issues in my community because...

1. They are burning too much coal and that is causing the children in pennsylvania to suffer from asthma
2. We are one of the states with the worst air in the country because in the west of Pennsylvania there is too much pollution and that CO2 goes to the atmosphere and this co2 spread in to the air
3. We all need a clean city where electricity comes from renewable energy. You give that to us and the environment .

In conclusion, I hope that carbon dioxide is reduced in Pennsylvania because the planet it's dying and I know that we cannot go to the past but we can improve the present using clean energy so that our future is much better so that fewer children die and we have a good air without pollution

Sincerely: Stefany Genao

Also by Stefany:

distinguished gentlemen of the government today I write to you as one more citizen of this country and of this city to ask you to be fair with the environment our environment has too much CO2 and that is causing many citizens to suffer from asthma here in Pennsylvania and around the world Please let us be part of the decisions since we and the environment are what we pay for your decisions. I am not writing to judge you but to make a difference if you do not realize our planet can no longer have more CO2 in its air. The air is polluted and they do

nothing, they just watch innocent children die every year. if they continue as they are, not only our lives will be at risk but also the future that we leave to future generations. But now we can make the change, let us help because if we continue to send more toxic gases into the atmosphere we will be the next great extinction. so be fair to the environment and to the people who defend it because you are not the ones who see innocent children die, plants and animals die from CO2 every year, enough to believe that we destroy this planet more because you will realize that your greed is only going to lead all of you to death and you will regret it When global warming is so great that nothing can survive you will want to turn back time and you will not be able to because it will be too late also be careful that it is Better to eliminate co2 than to have all the money in the world and live on a planet that only has chemical gases.

Thank you for reading this .

Hello,

I'm writing to you today to support the Carbon Dioxide Cap and Trade plan.

As a 9th grade student at Reading High School, greenhouse gases raise equity and environmental justice issues in my community because...

A lot of pollution looks absolutely terrible i dont think it should be like this its ruining our beautiful sky soon we wont be able to see the stars.

The people with asthma has to suffer and i dont think they should have to be breathing in polluted air; this has to change.

This polluted air is giving us asthma and destroying our planet some kids die from this polluted air and some end up having birth problems; would you want your kids having their lungs damaged because of how much pollution, including carbon dioxide is in the air no right? So this must change.

In conclusion, I hope that carbon dioxide is reduced in Pennsylvania because...' we must save this planet before its too late.

Sincerely,

A regular citizen that sees the cruel world (Kennith)
