 Alexandria, PA 16611 US

Comments entered:

I am not in agreement with very little that the current administration has to say because they do not have the average persons welfare or wellbeing in mind. The true cost of saving this planet or this state is so astronomical that no one could even guess or even come close as their opinion is just that, its their opinion and cannot be proven by facts at hand today. If we go GREEN we will lose countless jobs, people, and a tremendous loss of income as everything in the GREEN movement requires. I am all for clean air and a healthier lifestyle but when the cleaner energy associated with this movement is more cost effective then I would whole heartedly agree with us going in that direction. I believe we should use a little wisdom and be careful that we don't jump on the bandwagon too soon. There are many dissenters to this GREEN movement that disagree with them greatly with just as many facts and figures to back up their viewpoint. For example has anyone checked out the difference in the costs of electricity comparing 'clean' energy to other energy. Its almost double in cost. Every thing is getting more efficient and can go more mpg or whatever way they rate the energy consumption for that particular vehicle or operation. I know many energy plants put off some if not a lot of CO2 but most of them are in rural areas where the CO2 can and is used by the trees and other plants to produce oxygen which we all need. These people behind the GREEN movement want to tax anybody and everything including farmers for the gas their livestock produces, I've worked around farms and would like to see how they will find out how much gas a cow produces, maybe they could contain it and fuel our cars and warm our homes.
