Dear Environmental Quality Board,

The world is confronting it's biggest crisis since human occupation. If we waffle and take back steps we will leave a harsh and uninviting planet as our legacy to our children and grand children. We must act, and act quickly and decisively. Pennsylvania has not shown the leadership on this issue that it could and must. Joining RGGI is a good, but honestly minimal step. We must do more but we absolutely must do this.

I'm writing to urge the Pennsylvania Department of Environmental Protection (DEP) and the Environmental Quality Board (EQB) to adopt the proposed CO2 Budget Trading Program, which would enable us to work together with the Regional Greenhouse Gas Initiative (RGGI) states to cut our carbon pollution without delay.

We are in the midst of a growing climate crisis with all ten of the warmest years on record occurring since 2005, and with 2020 on course to be the second-hottest year ever. In Pennsylvania, excess heat is already impacting our health, the environment, and our economy. We cannot afford to ignore the crisis any longer. We must act now.

This rule will create a cap on carbon emissions with each ton available under the cap represented by an emissions allowance. Electric generators larger than 25 megawatts will need to obtain allowances equal to the pollution they emit, most of which will be purchased through an auction with proceeds deposited in Pennsylvania's Clean Air Fund.

Money from the Clean Air Fund can then be invested in projects that will help fight climate change, promote clean energy and energy efficiency, and otherwise reduce air pollution. In doing so, this will bring about a net increase of 27,000 jobs to Pennsylvania and increase our gross state product by nearly \$2 billion. This is the sort of action we need.

The framers of our state's Constitution had the foresight to include an environmental rights amendment which makes it clear we have a responsibility to protect our environment not only to ourselves but also for generations yet to come. It is vital that we do our part and cut carbon pollution.

Sincerely,
