I am a former general manager of a dispensary and these are the most frequent complaints we received.

Permit one family member or caregiver who is NOT a patient to attend consultations inside the dispensary. When you have an elderly man who is battling cancer, and you tell his wife she is unable to come in, it is just wrong. Partners and parents attend every medical visit with their patient, and now when they are trying something completely new, you are putting them in an uncomfortable situation. Sometimes patients have trouble comprehending due to TBI or mental health medications.

All terpenes and all cannabinoids to be tested and labeled on every mmj product.

Dosing needs to be standardized (if a tincture, a dose should be 1ml). So when dispensaries update their menus, the mg makes sense. Too many patients overmedicate because they assume each dose is 1ml when in reality many growers use 0.5ml.

Dispensary menus need to have top 3 cannabinoids and terpenes listed for each product.

Curbside should be an option forever. There are too many disabled patients.

Please reach out with any questions.
