## Re: eComment System

The Department of Environmental Protection has received the following comments on Proposed Rulemaking: Control of VOC Emissions from Oil and Natural Gas Sources (#7-544).

#### Commenter Information:

Joseph Harrick
JKLM Energy, LLC (jharrick@jklmenergy.com)
2200 Georgetown Drive Suite 500
Sewickley, PA 15143 US

RECEIVED

JUL 16 2020

Independent Regulatory Review Commission

### Comments entered:

#### To Whom It May Concern:

I am writing to provide comments on behalf of JKLM Energy regarding the Environmental Quality Board's proposed rulemaking #7-544 – Control of VOC Emissions from Oil and Natural Gas Sources. We support the technical comments from the Marcellus Shale Coalition.

JKLM Energy is an independent oil and natural gas exploration and production company with a highly experienced technical staff based in Franklin Park, PA and Coudersport, PA. JKLM Energy has a leasehold position of over 120,000 acres located solely in Potter County, PA. We develop wells in the Burkett, Marcellus, and Utica formations. JKLM Energy proudly and responsibly produces clean natural gas to meet the nation's growing energy demand while helping to make America energy independent. JKLM Energy is committed to protecting the environment, creating jobs, and maintaining positive relationships in the communities in which we operate.

Pennsylvania has a rigorous program of environmental regulation of all aspects of unconventional gas well development. The State Review of Oil and Natural Gas Environmental Regulations – an independent, non-profit regulatory review commission – has given our oil and gas program high marks. Furthermore, the program serves as reference for other state

regulatory agencies.

Pennsylvania's regulatory environment, voluntary efforts by the natural gas industry and increased utilization of natural gas have contributed to improved air quality. Total VOC emissions decreased by 56% between 1990 and 2017. Total NOx and SOx reductions during this timeframe were 84% and 92%, respectively. In the power generation sector, where natural gas use has increased significantly, NOx and SOx reductions between 2005 and 2017 amount to 80% and 93%, respectively. VOC emissions from the sector declined by 33% during this timeframe. Of particular interest, production-based methane emissions intensity, expressed as metric ton CO2 equivalent /barrel of oil equivalent, declined in the Appalachian region between 2011 and 2017 by 82%. Furthermore, CO2 emissions from Pennsylvania's power sector decreased by 35% between 2010 and 2017. These air quality improvements have saved countless lives and significantly reduced respiratory-induced hospitalizations while providing billions of dollars in public health benefits to the citizens of Pennsylvania.

I strongly encourage you to base your decisions on facts while recognizing and continuing to encourage and facilitate the significant technological advances of the natural gas industry in Pennsylvania. Any final rule on this matter must be cost-effective and provide a reasonable compliance schedule for affected facilities.

Thank you for your consideration.

Joseph M. Harrick General Manager, Environmental Health and Safety
